## A. Project Overview

### 1. Introduction

Air conditioning system plays a vital role in providing comfort to the passenger while traveling which is considered to be a major factor that drives the growth of the railway air conditioning system market. A Railway air conditioning system is generally used to control ventilation, humidity, and temperature in railways. To provide indoor air quality and thermal comfort in railways, heating, ventilation, and air conditioning system are used. AC and DC powered heating, ventilation and air conditioning (HVAC) system are installed in different rolling stocks such as high-speed trains, trams, coaches, locomotives, metro's, passenger trains, light rail passenger vehicles, and subway rail vehicles. Air conditioning systems in the railway are not only installed to provide comfort to the passenger, but it also used to cool down the other parts of the railway. The different components of a railway air conditioning system are alternators, evaporators, condensers, filters, thermostats, pre-cooling unit, compressor, regulator box, etc.

Railway air conditioning systems can be Standalone type, roof-mounted type, and side-mounted type. Among these, the roof-mounted type is expected as the most preferable railway air conditioning system over the others as it requires less space for installation and avoids congestion.

### 2. Objective

The objective of this project is to procure fifteen (15) brand-new Air-Conditioning Units for PNR's existing Passenger Coaches.

## B. Scope of Work

1. The scope of work shall be procurement, delivery, installation, testing, and commissioning of new Air Conditioning Units for existing passenger coach
2. Should there be a need to upgrade or to replace the existing electrical components of the EMU Cars, such as Wire cables, Circuit breakers, and relays for the ACU to run at maximum load capacity, the cost shall be included in the bid price tender of the supplier.

The Control Module of the Air Conditioning Units must have the following:

- a. Air Conditioning Control
  - For switching the air Con into a different mode such as OFF, VENT, HALF COOL, and FULL Cool or AUTO or MANUAL
- b. Test Switch
  - A test switch on the control board for diagnostic of Air Con Unit components during failure or maintenance period.
- c. Starting control

  - A Thermostat for interior temperature control is located in the air conditioning control panel.

## Air Conditioning System Protection

- a. Protection
  - The air conditioning unit's equipment must be protected with the protections that are installed in the air conditioning unit or the air conditioning control panel. Protection such as Interlocking compressor motor with the condenser fan motor and the evaporator fan motor that the compressor cannot operate unless the fans operating. Miniature Circuit Breaker (MCB), Main circuits, and control circuit must be protected from overcurrent by any means of circuit protection.
- b. High & Low-Pressure Switch
  - A High and Low-pressure switch must be installed in the refrigerating circuit. If the pressure of the refrigerant becomes unusual high pressure or low pressure, the switch will stop the associated compressor. Failure situation is kept by the relay for failure and it can be canceled by the reset switch. The fault indicator lamp lights up when HPS or LPS is operated.
- c. Phase Failure Detector
  - There should be a Phase Failure Detector to prevent the wrong phase sequence power supply.
- d. Over-Low Voltage and Over-Low Frequency (OLV-F)
